

Practical 7 – Implement server cluster with Windows Server 2012.

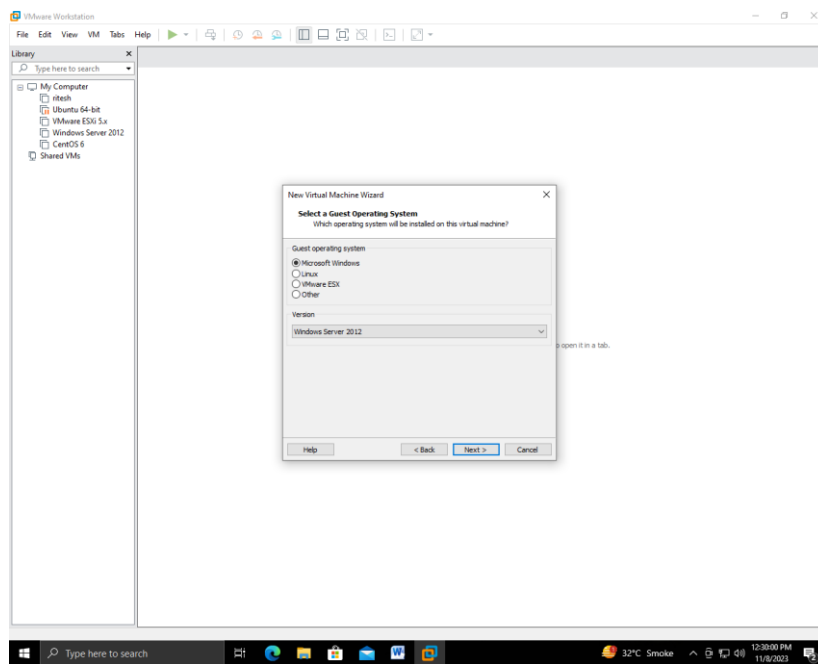

Step 1 – Create new virtual machine

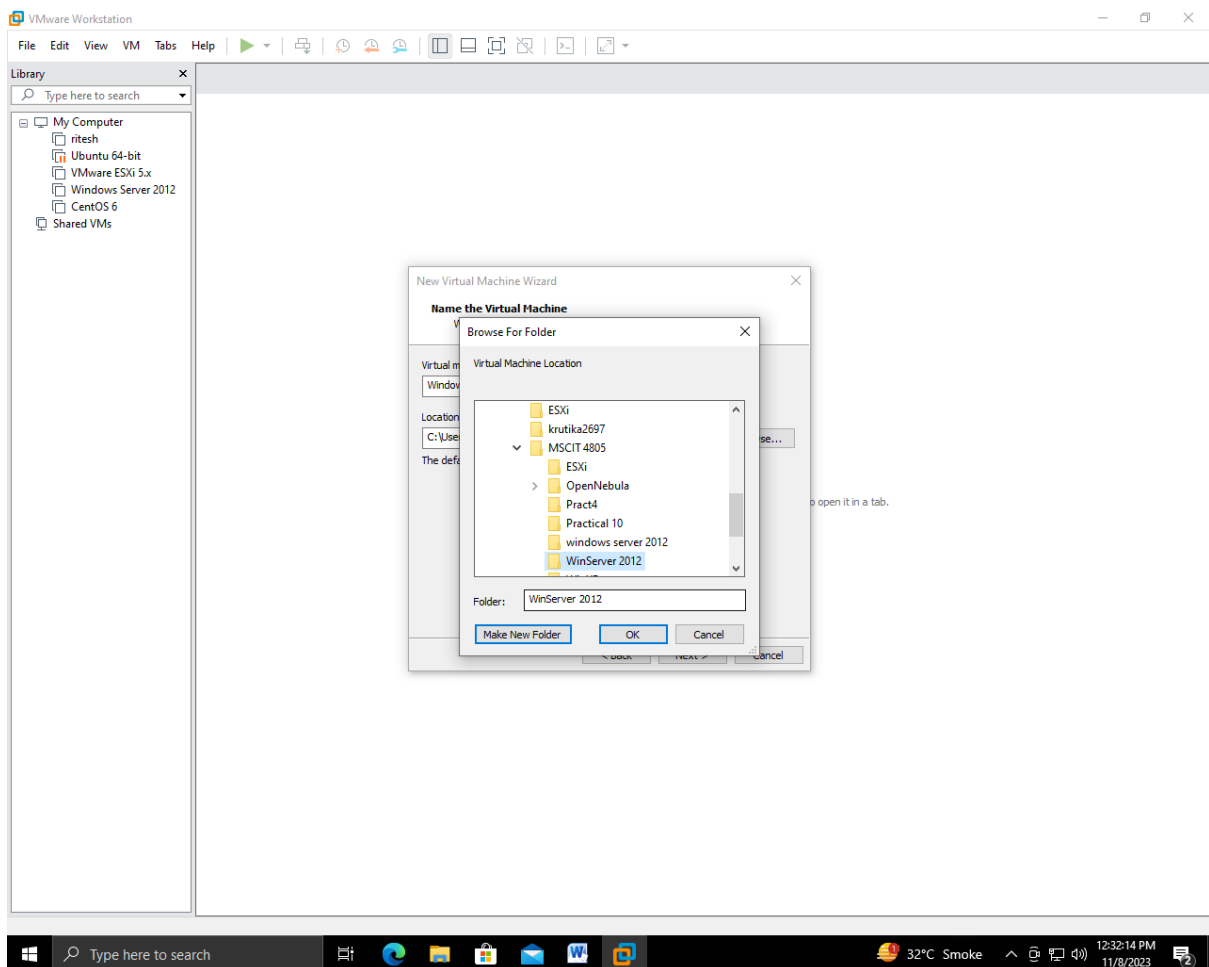

Step 2 – Select radio button I will install operating system later.

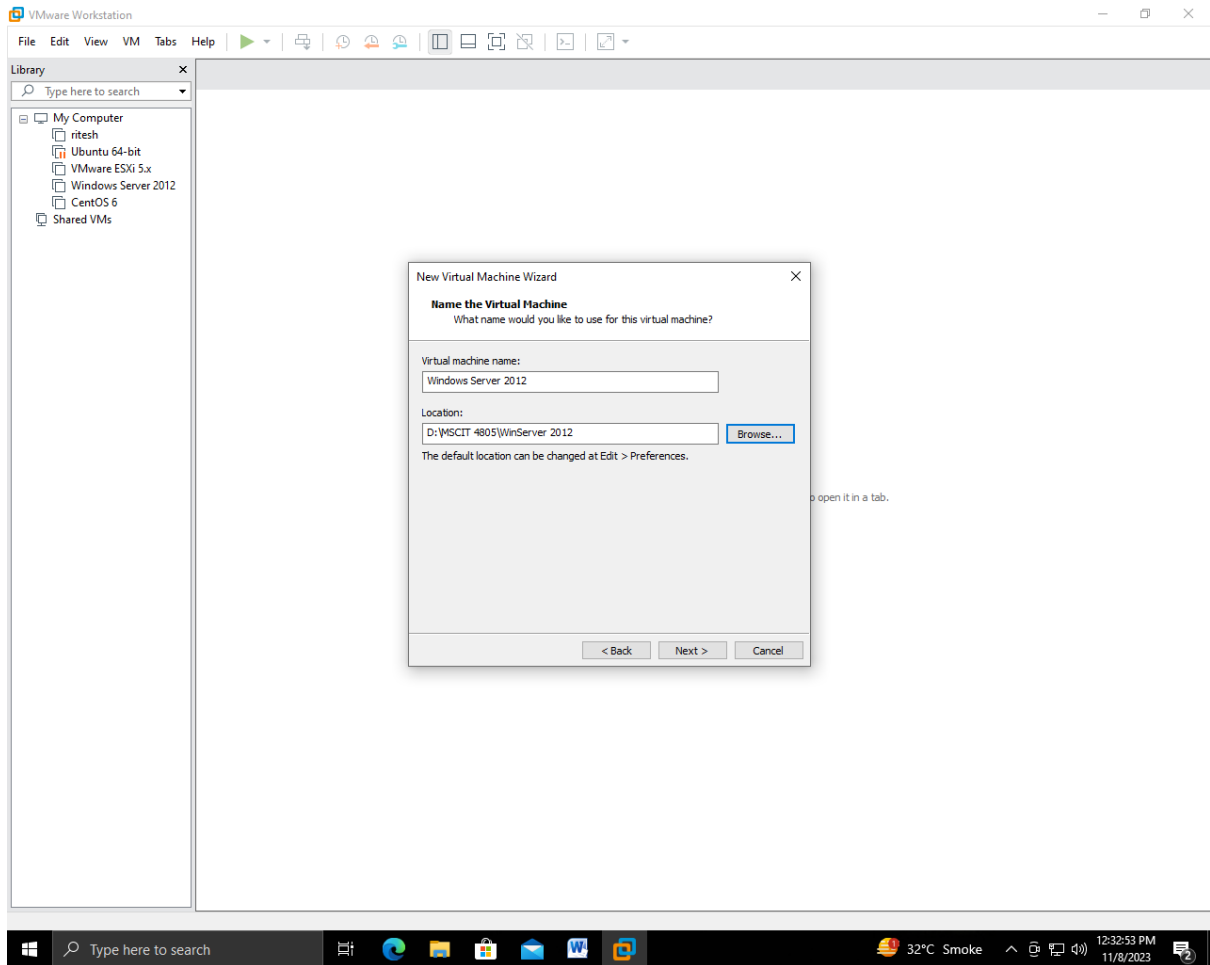

Step 3 – Select radio button Microsoft windows.

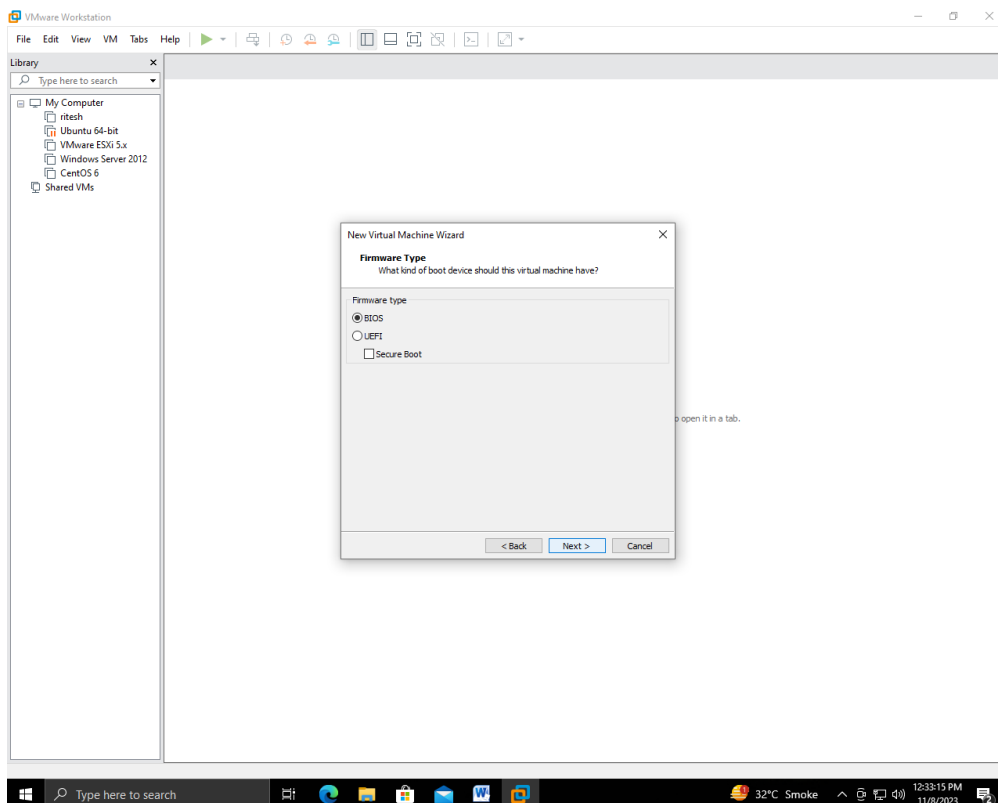

Step 4 - Create new folder

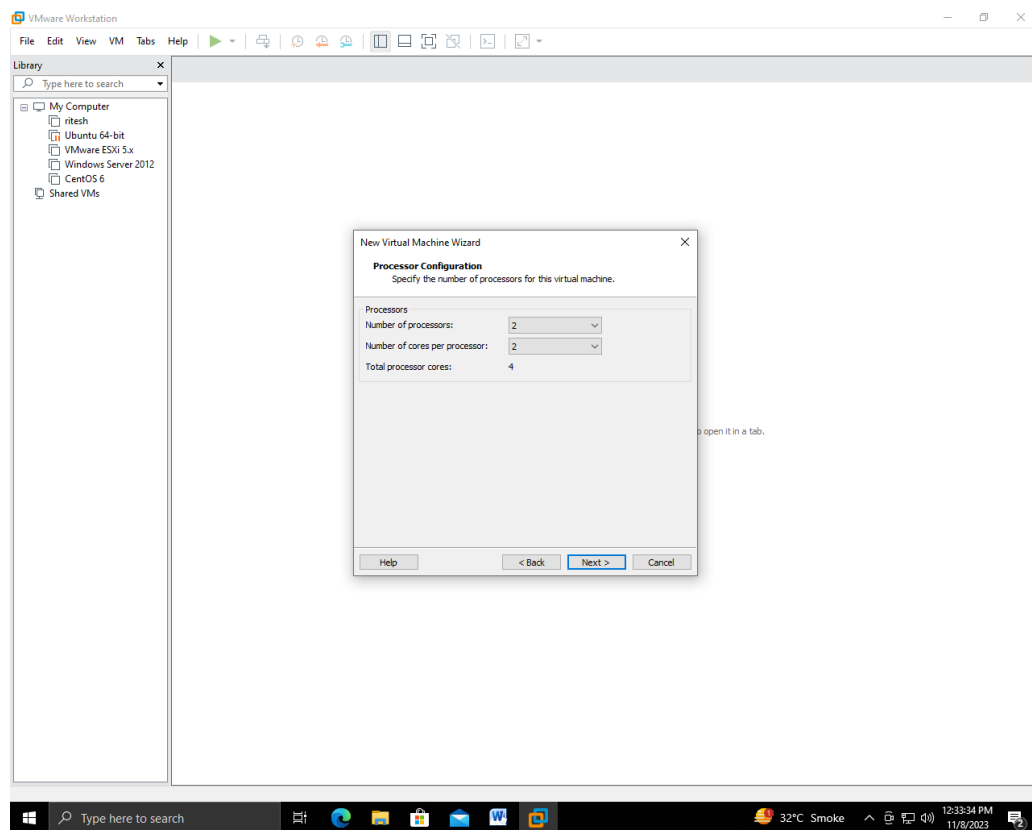

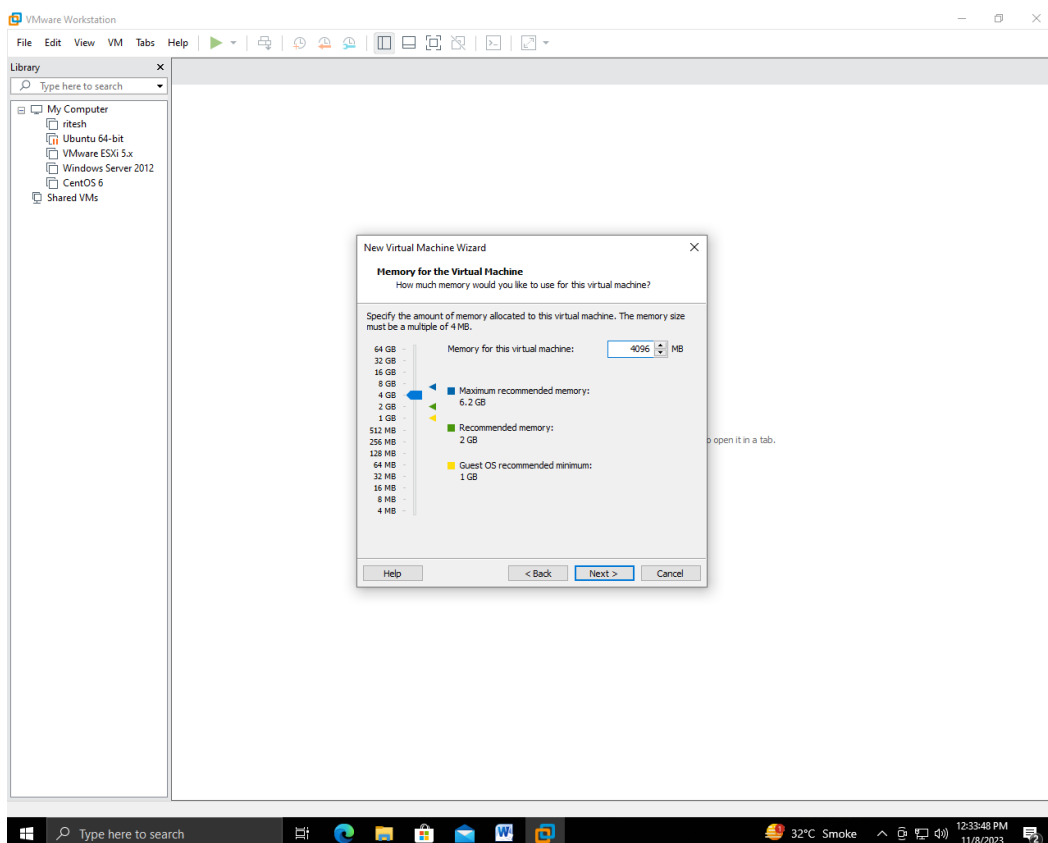

Step 5- select firmware type as BIOS

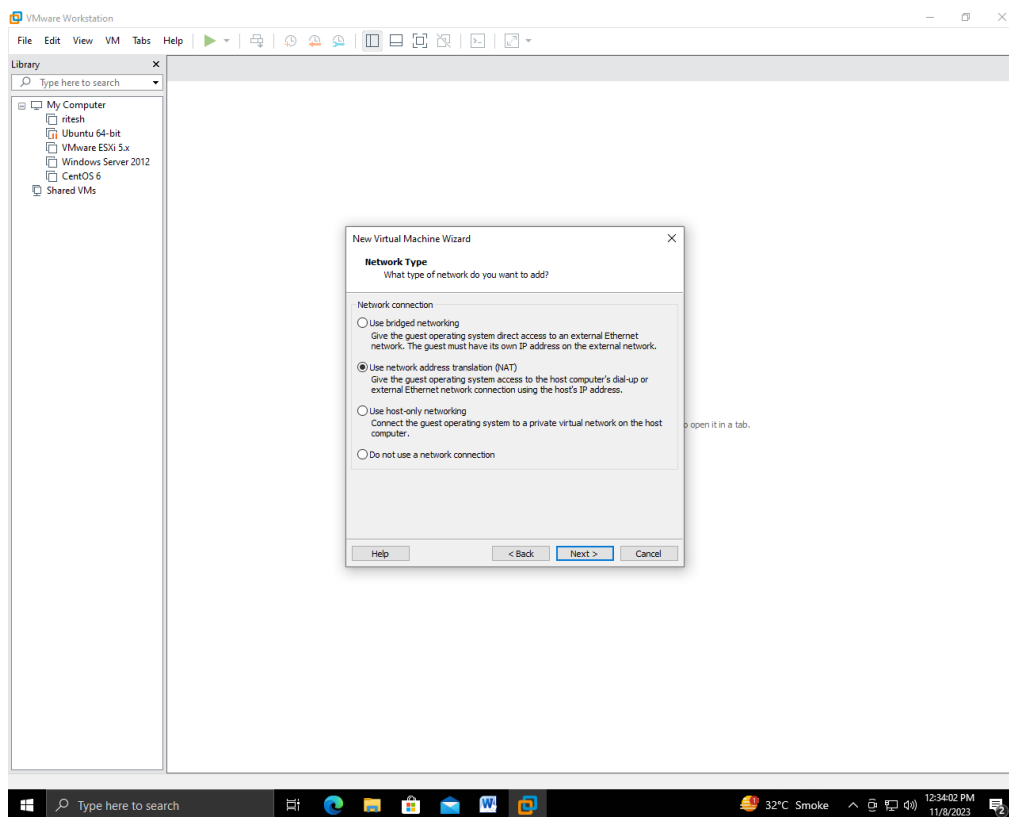

Step 6- select processor count as 2 and core count as 2.

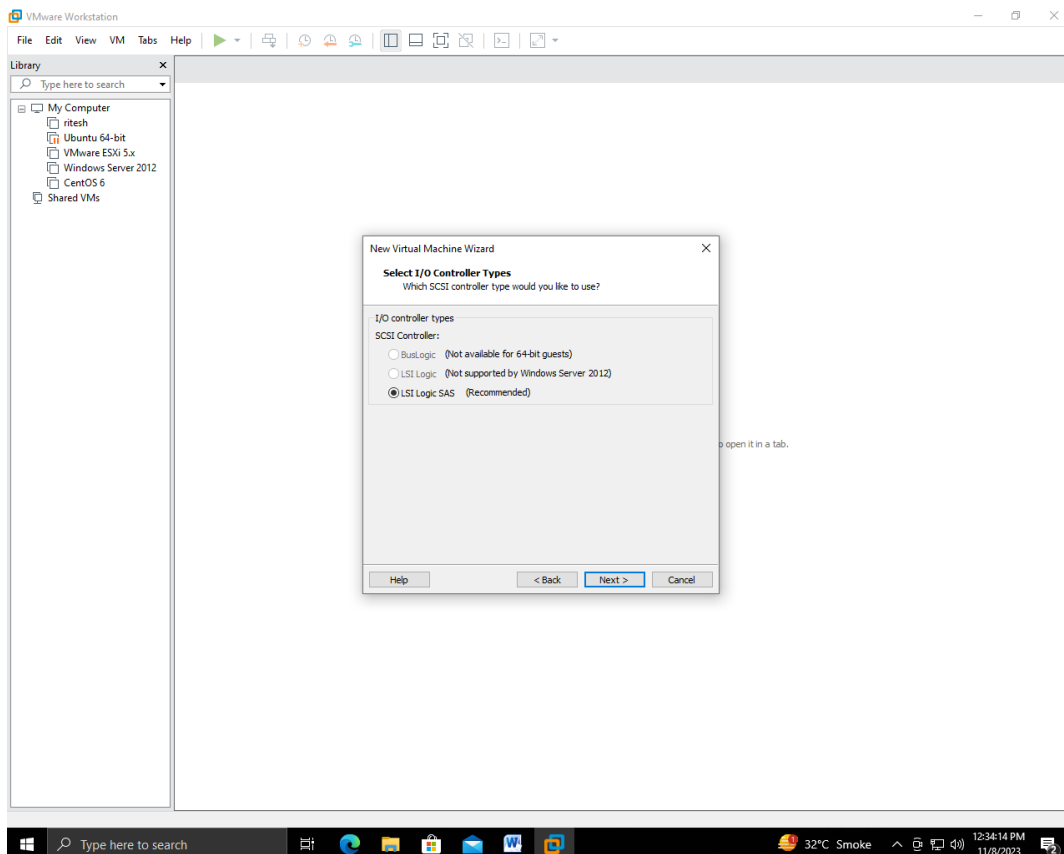

Step 7 – select RAM size as 4096MB.

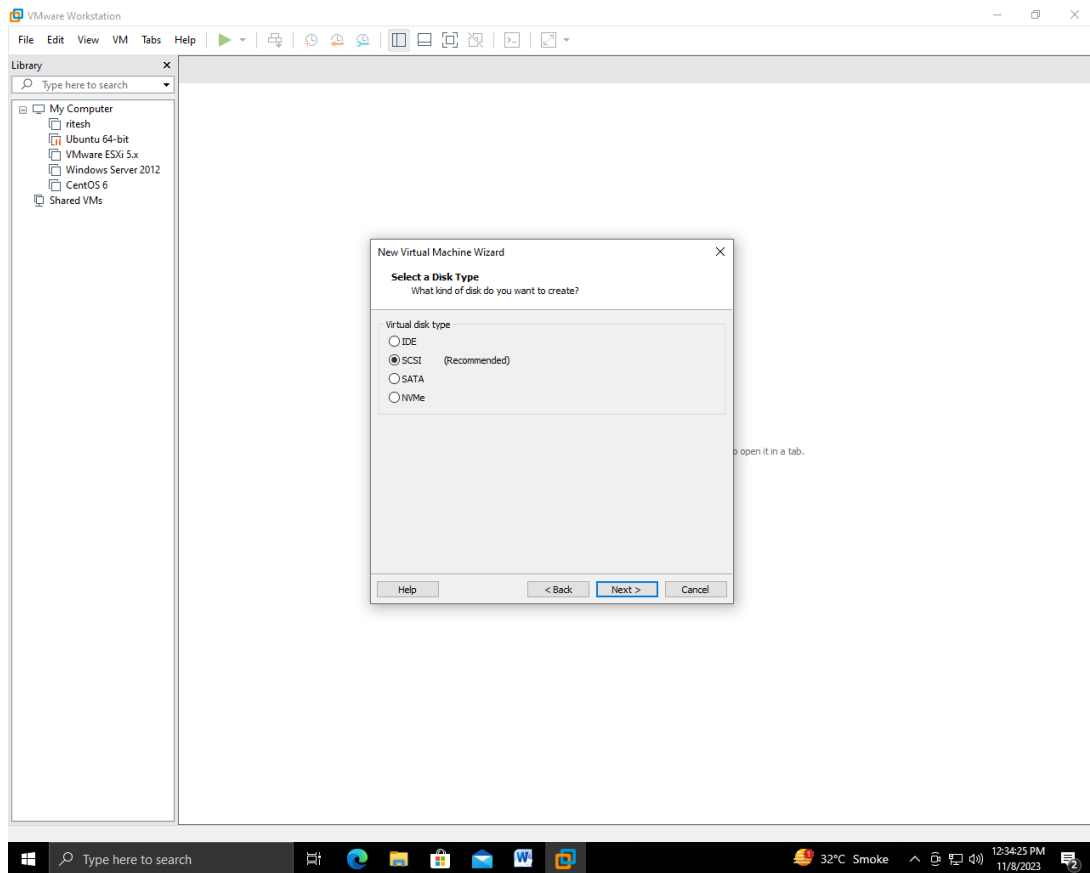

Step 8- select Network Adapter as NAT.

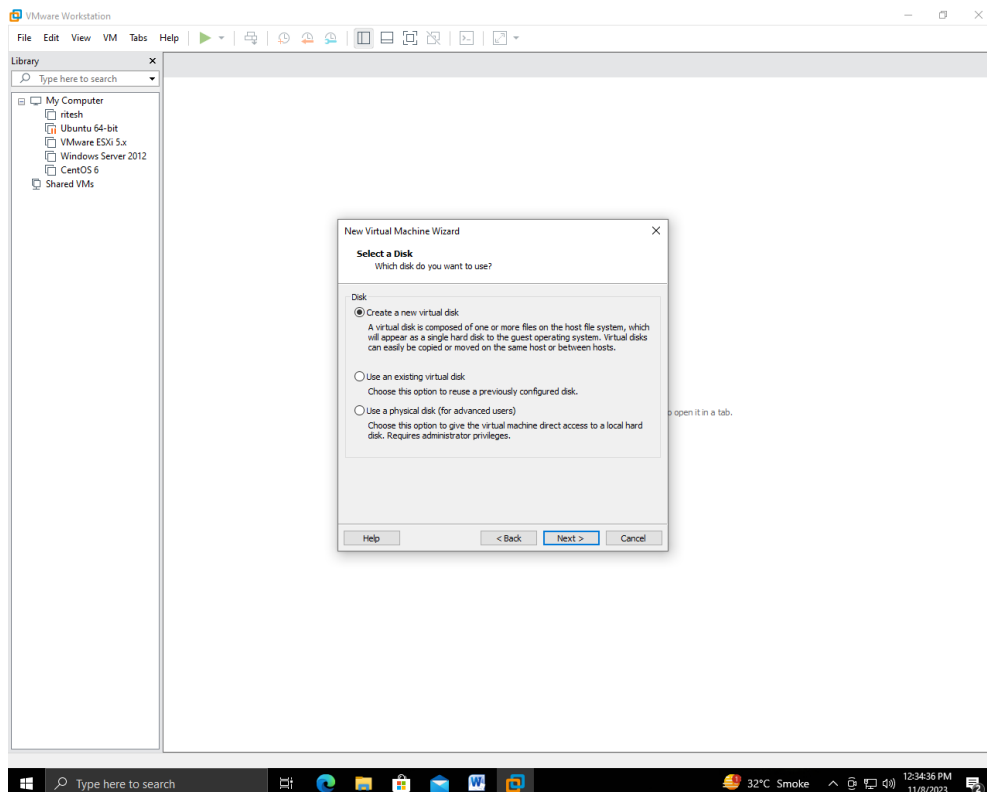

Step 9- select I/O controller type as LSI LOGIC SAS

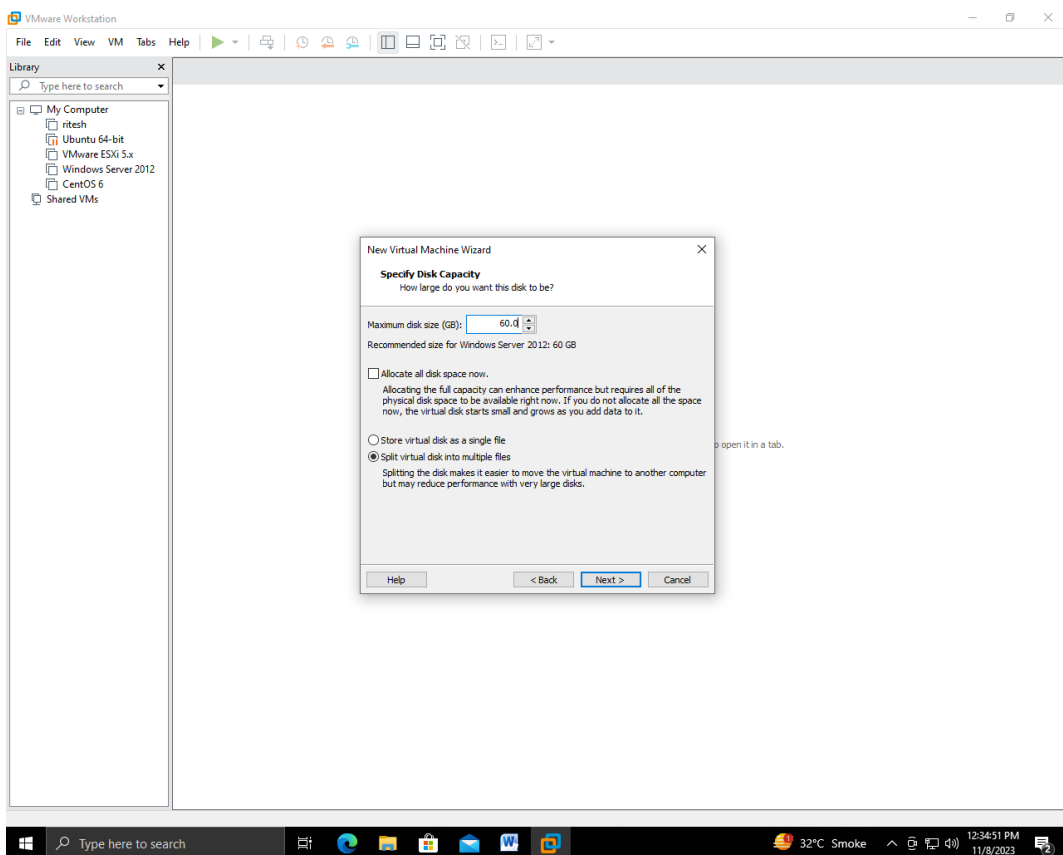

Step 10- Select disk type as SCSI.

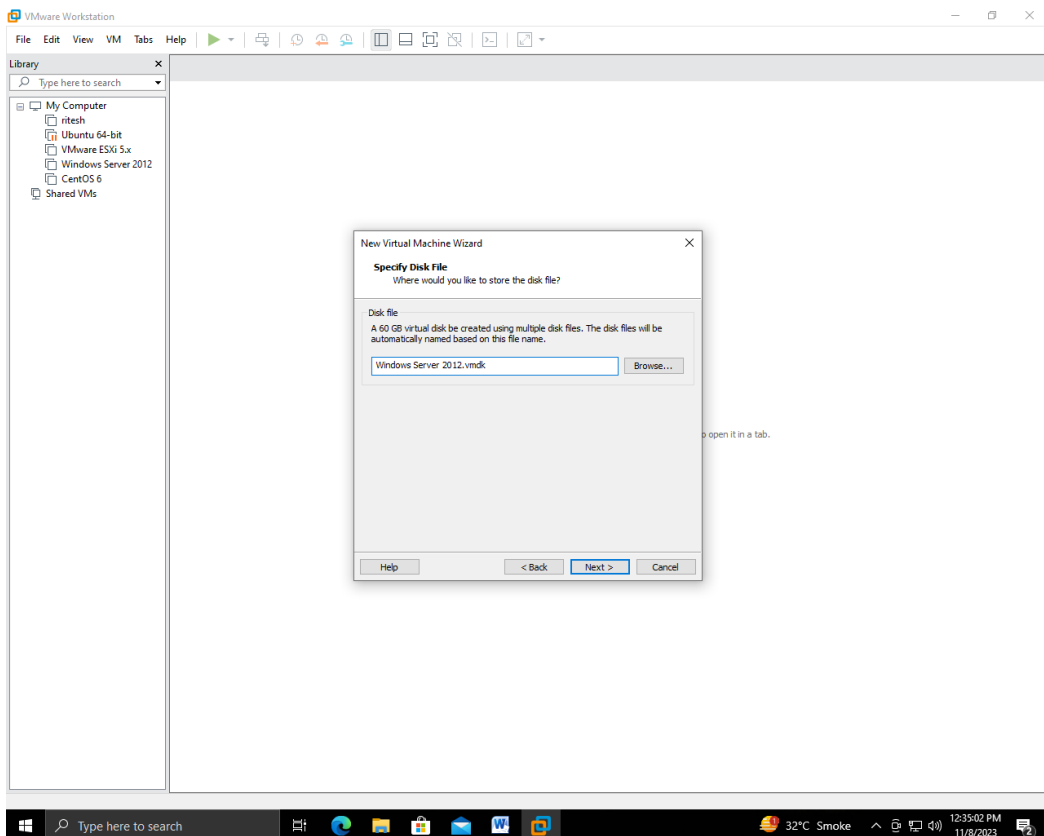

Step 11- Select Create a new virtual disk.

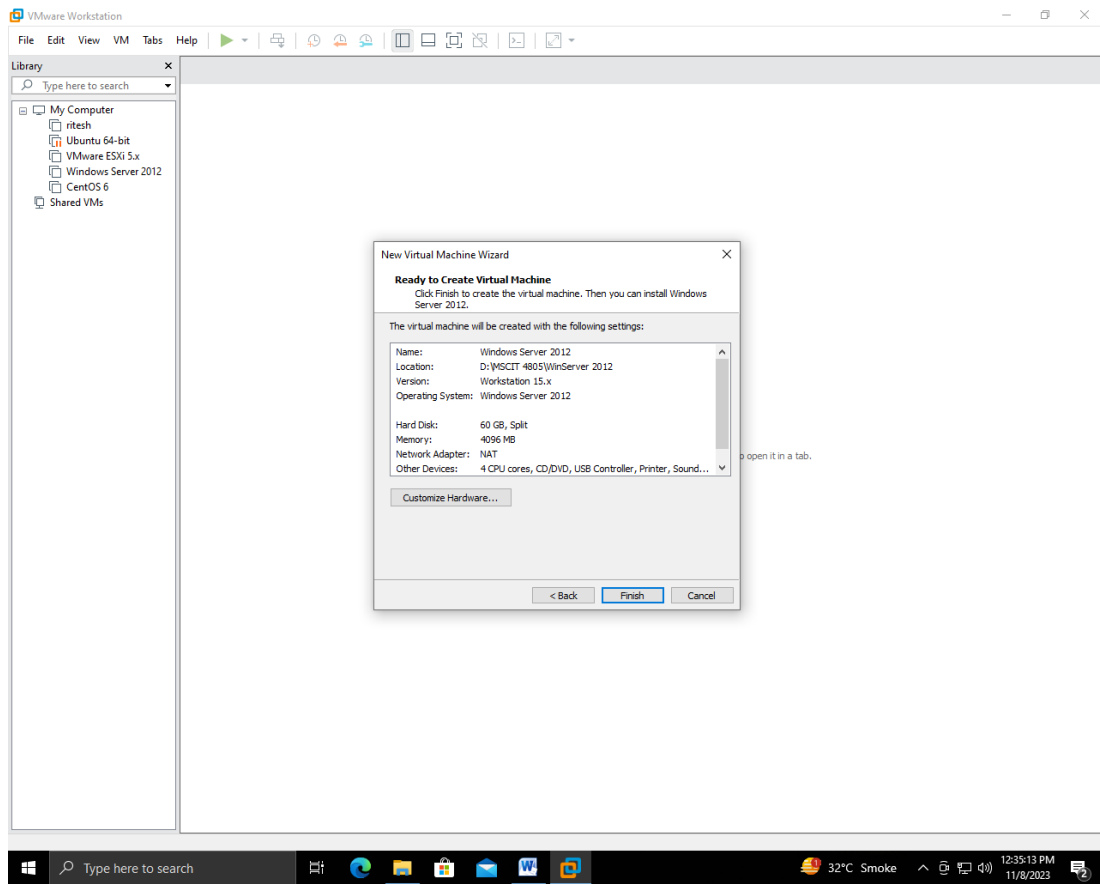

Step 12- Give virtual disk a disk size of 60GB.

Step 13- select location for disk file.

Step 14- A summary will be shown in a new dialog box > then click on finish.

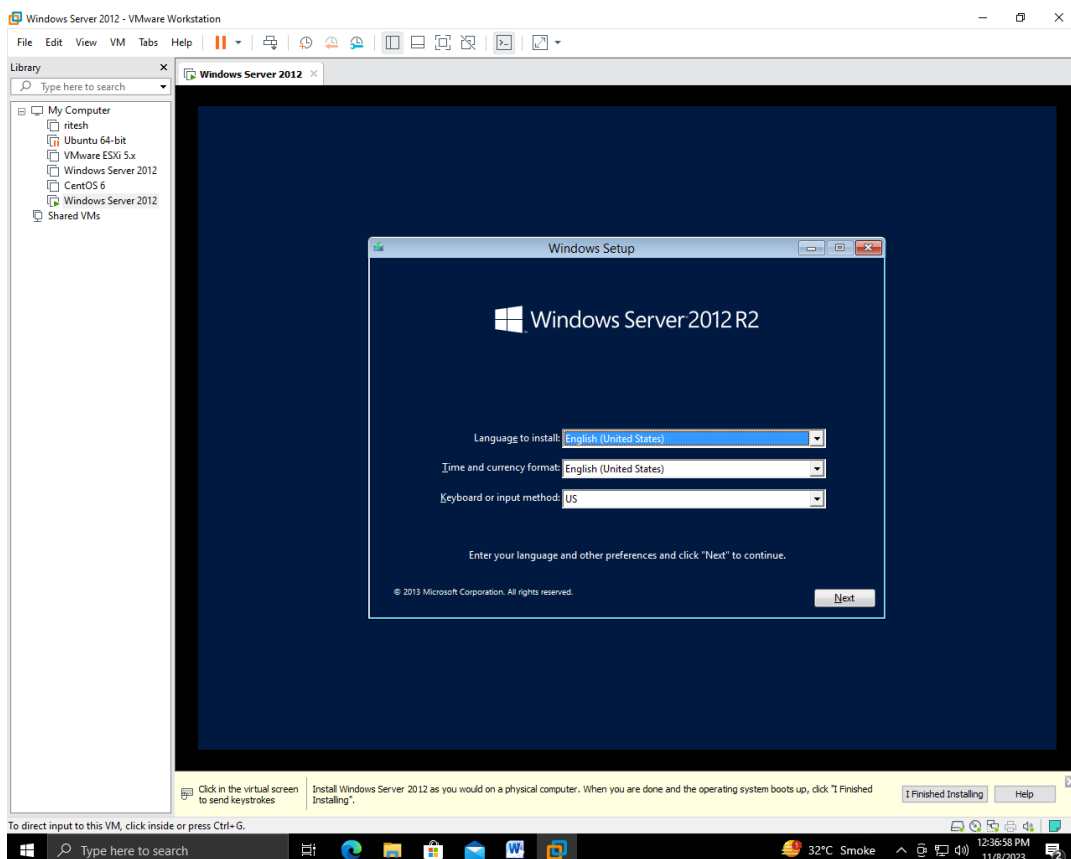

Step 15- click on CD/DVD > select ISO image file (Operating System).

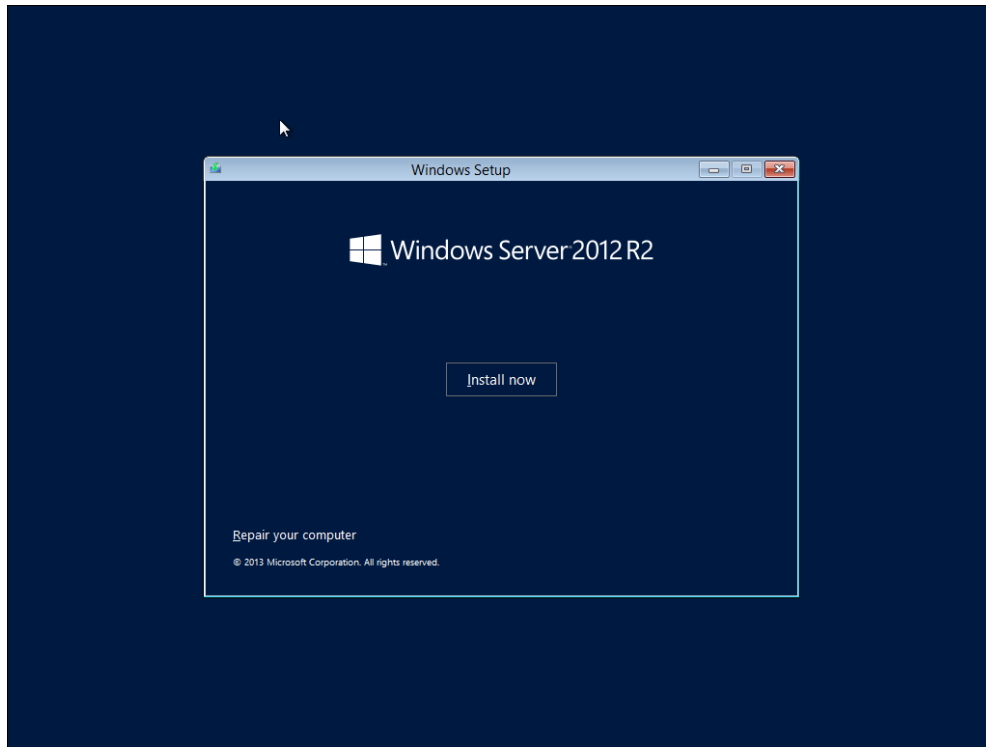

Step 16 – click on Processors >check checkbox with label as Virtualize Intel VT.

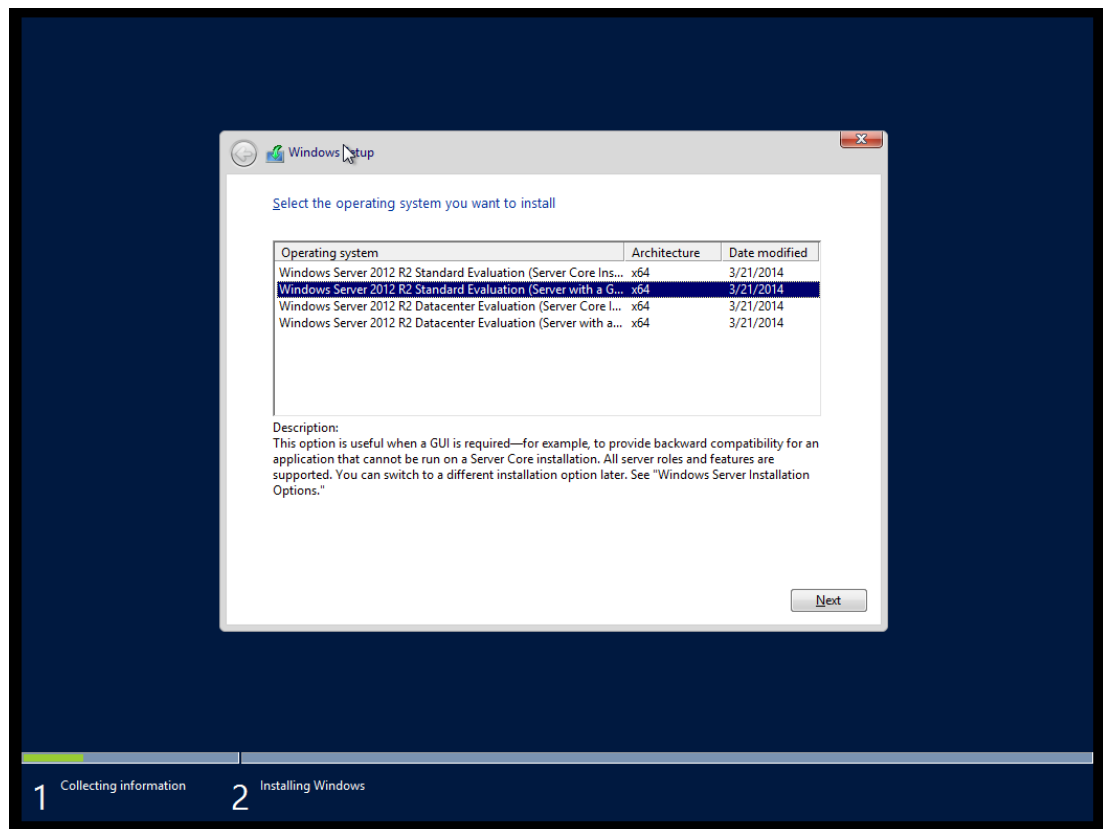

Step 17- start to bring the VM to life.

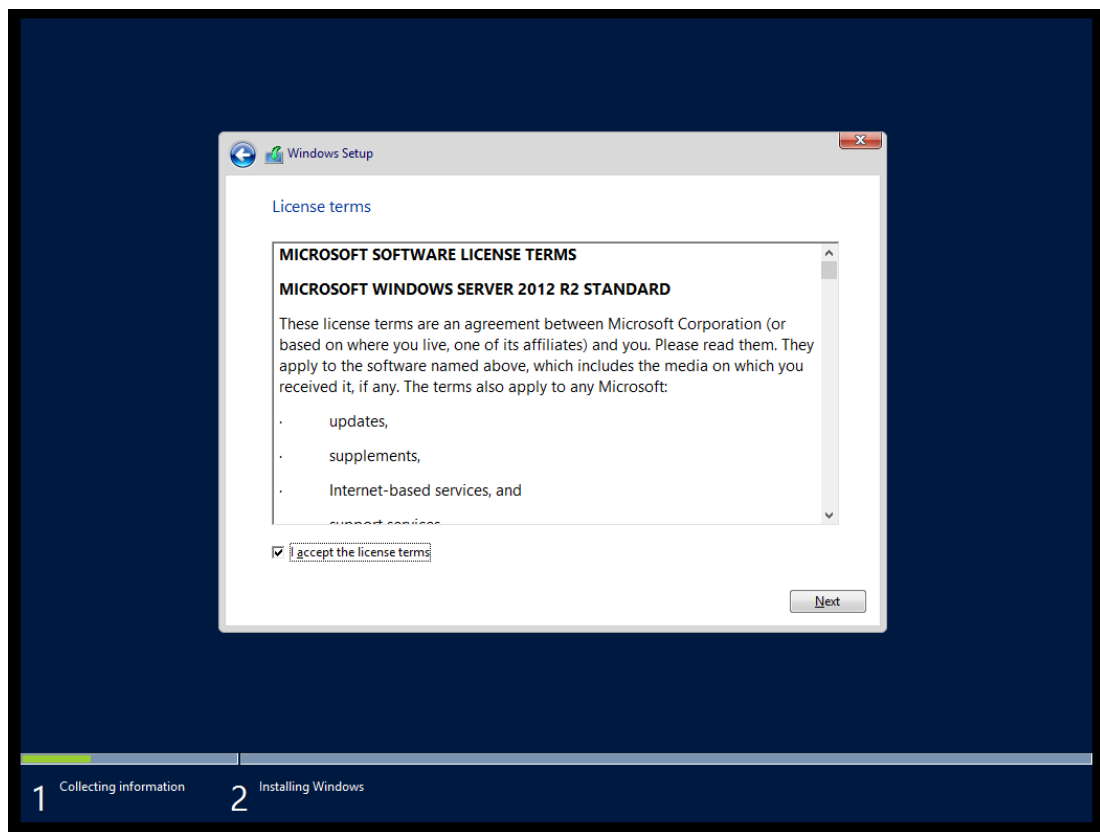

Step 18 - Windows server setup > install now.

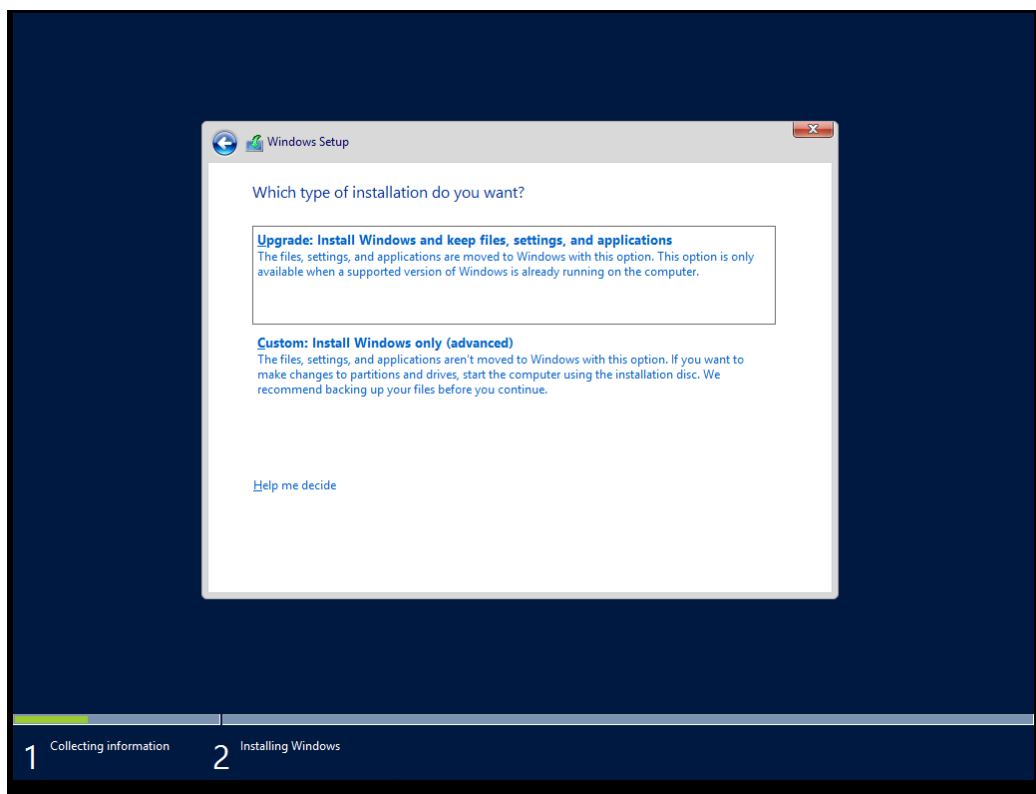

Step 19 – Windows Server 2012 R2 Standard Evaluation (Server with a GUI interface).

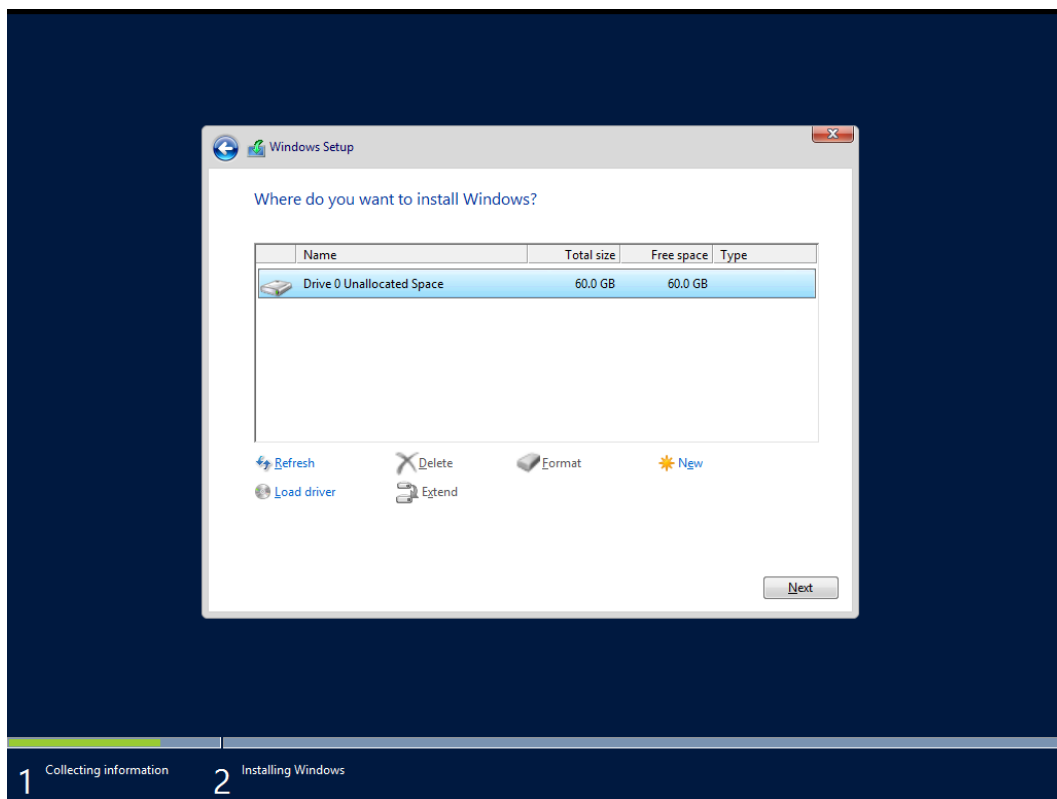

Step 20 – Accept the license > then click on next.

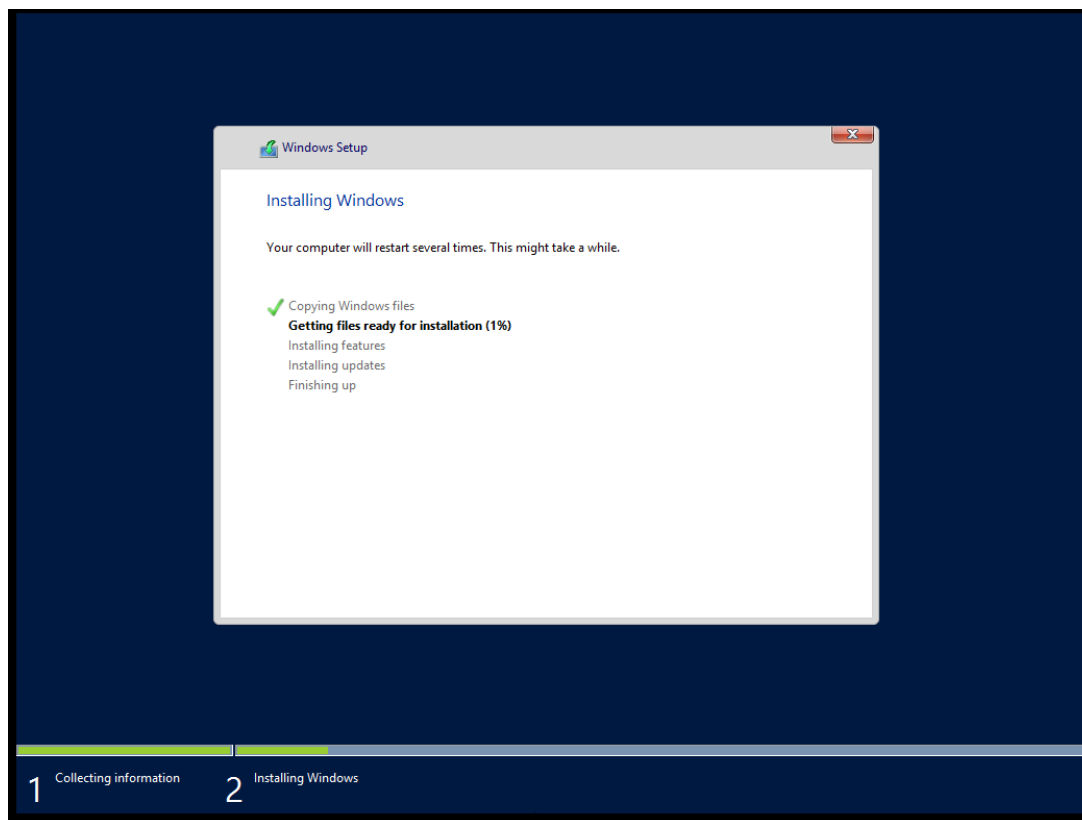

Step 21 – select custom installation.

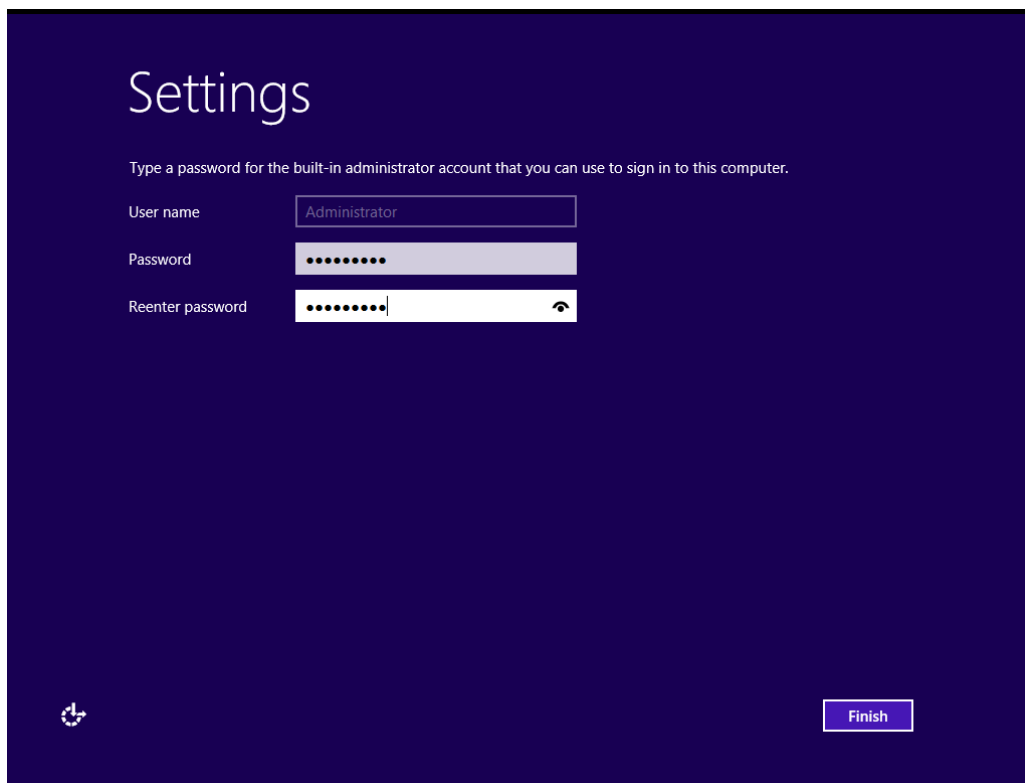

Step 22 – select the 'Drive 0 unallocated space' > click on next.

Step 23 – Installation will start

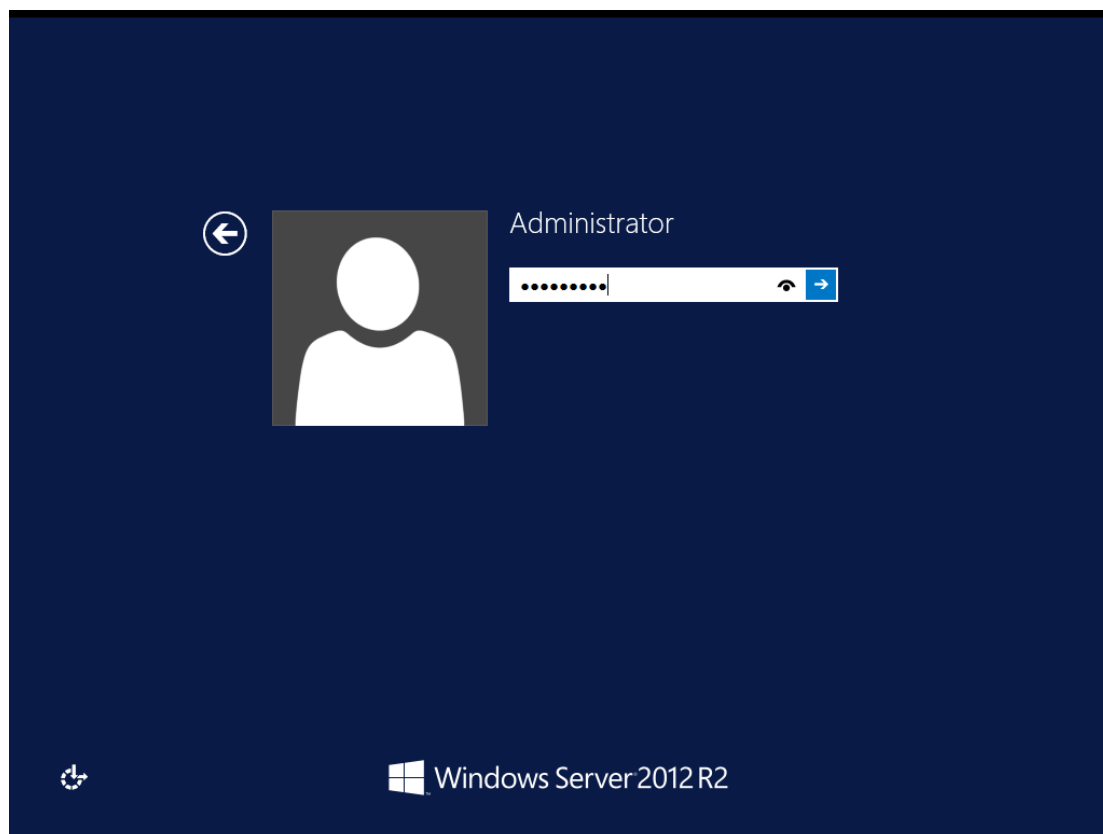

Step 24 – create password : admin123# and again re-enter the password to confirm.

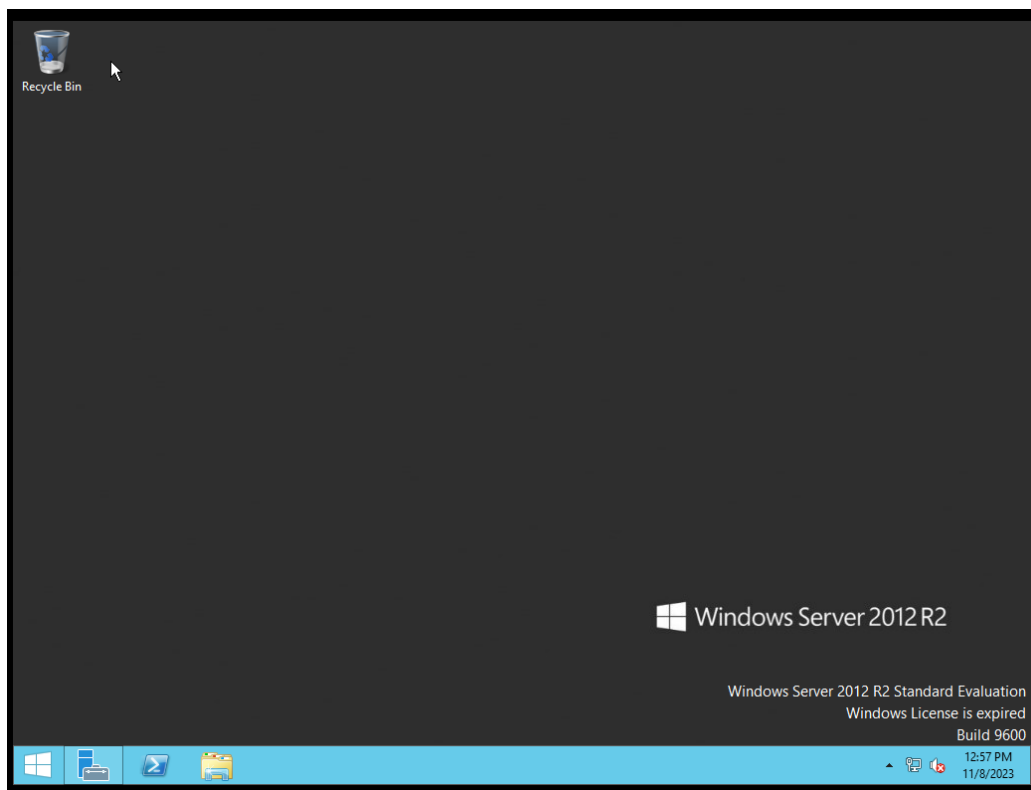

The image shows the Windows Settings application with the title "Settings" at the top. Below the title, there is a instruction: "Type a password for the built-in administrator account that you can use to sign in to this computer." There are three input fields: "User name" with the text "Administrator", "Password" with ten dots, and "Reenter password" with ten dots and a small eye icon to its right. At the bottom right, there is a blue button labeled "Finish". At the bottom left, there is a small circular icon with a right-pointing arrow.

Step 25- Login by entering your password.

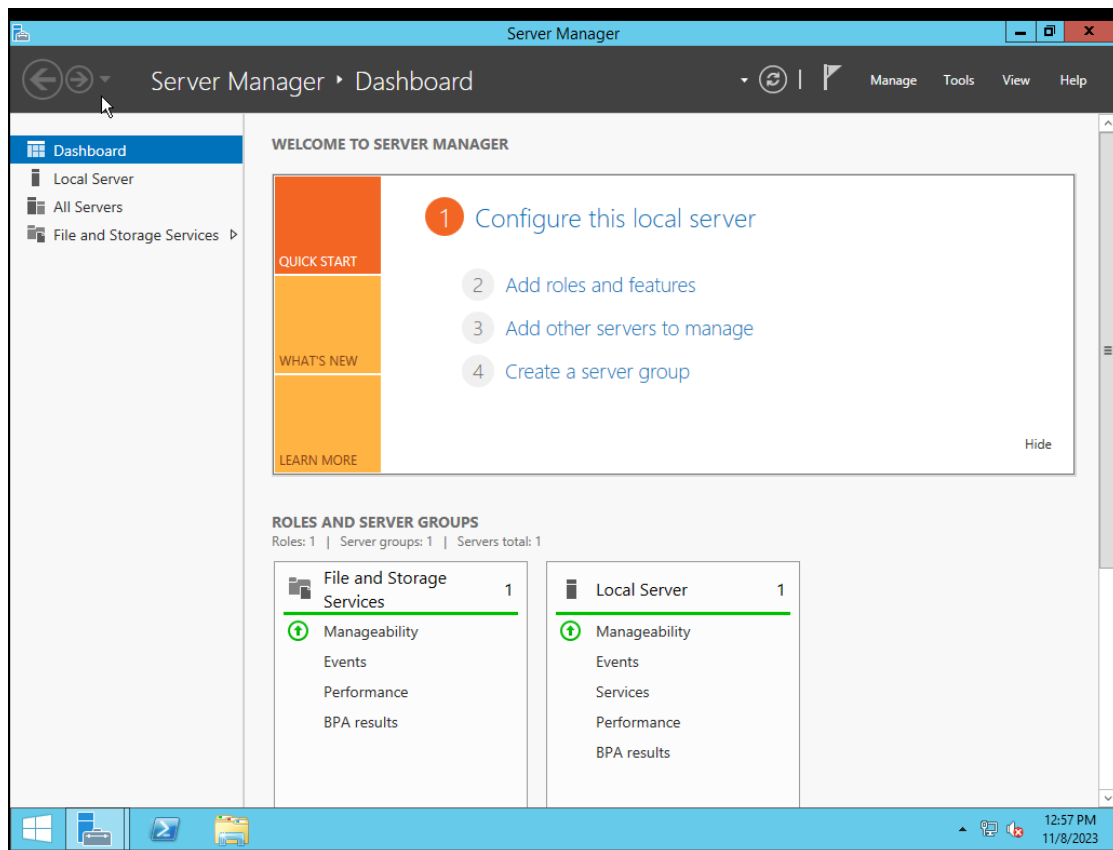

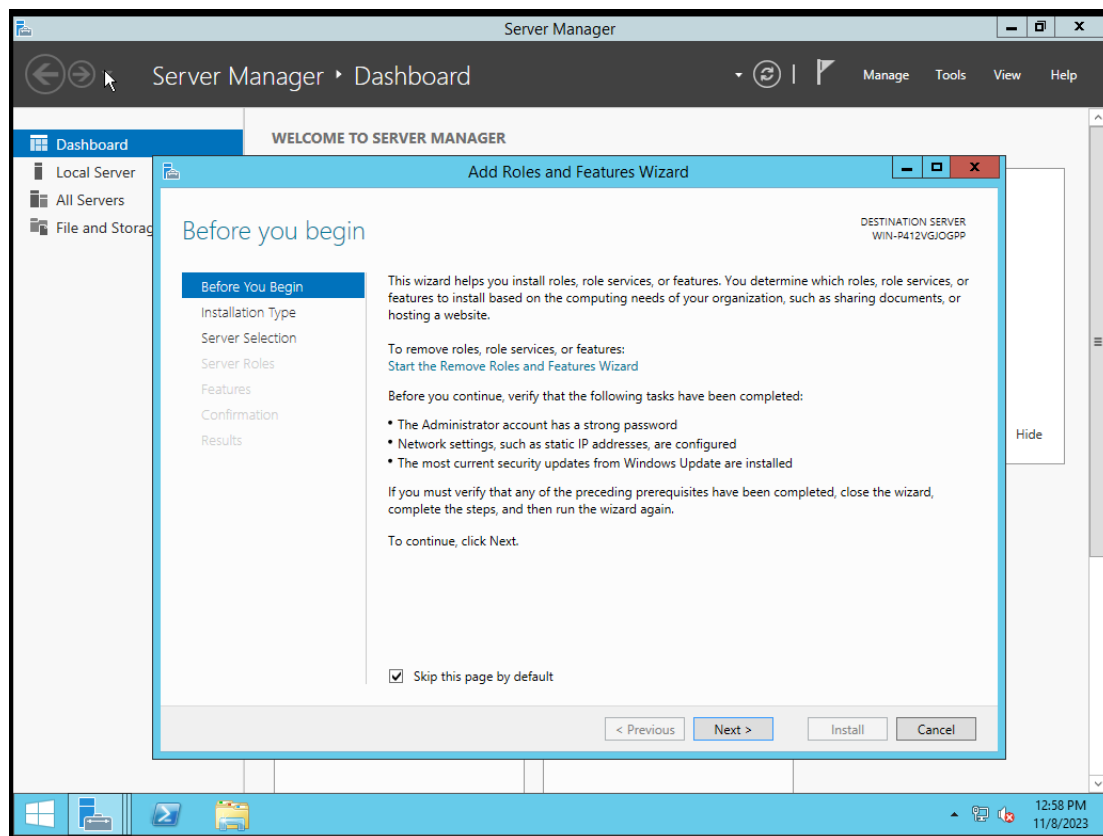

The image shows the Windows login screen. On the left, there is a circular icon with a left-pointing arrow. Next to it is a grey silhouette of a person. To the right of the silhouette, the word "Administrator" is displayed. Below the name is a password input field with ten dots and a small eye icon to its right. At the bottom left, there is a small circular icon with a right-pointing arrow. At the bottom center, there is the Windows logo followed by the text "Windows Server 2012 R2".

Step 26 – Your windows server is ready to use virtually.

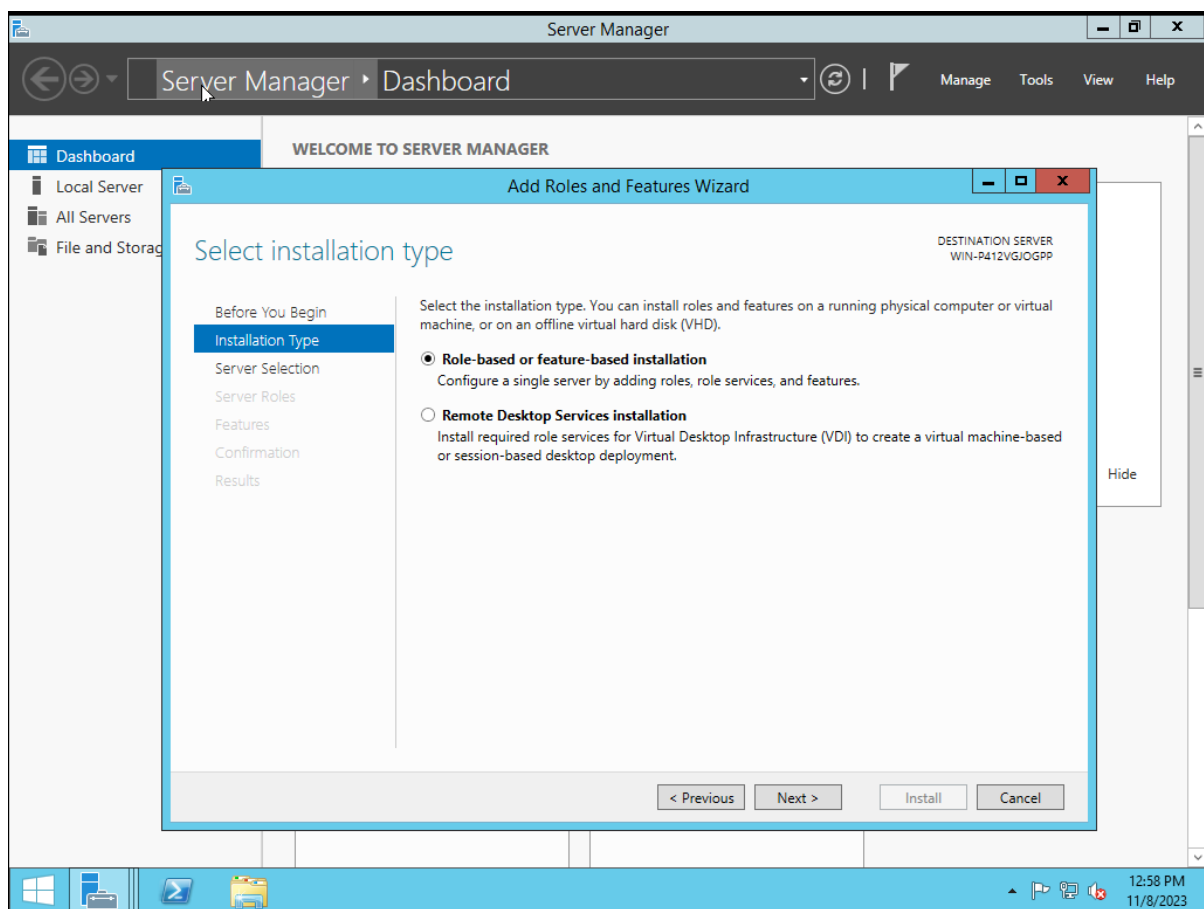

Step 27- Go to server manager > dashboard > Add roles and features.

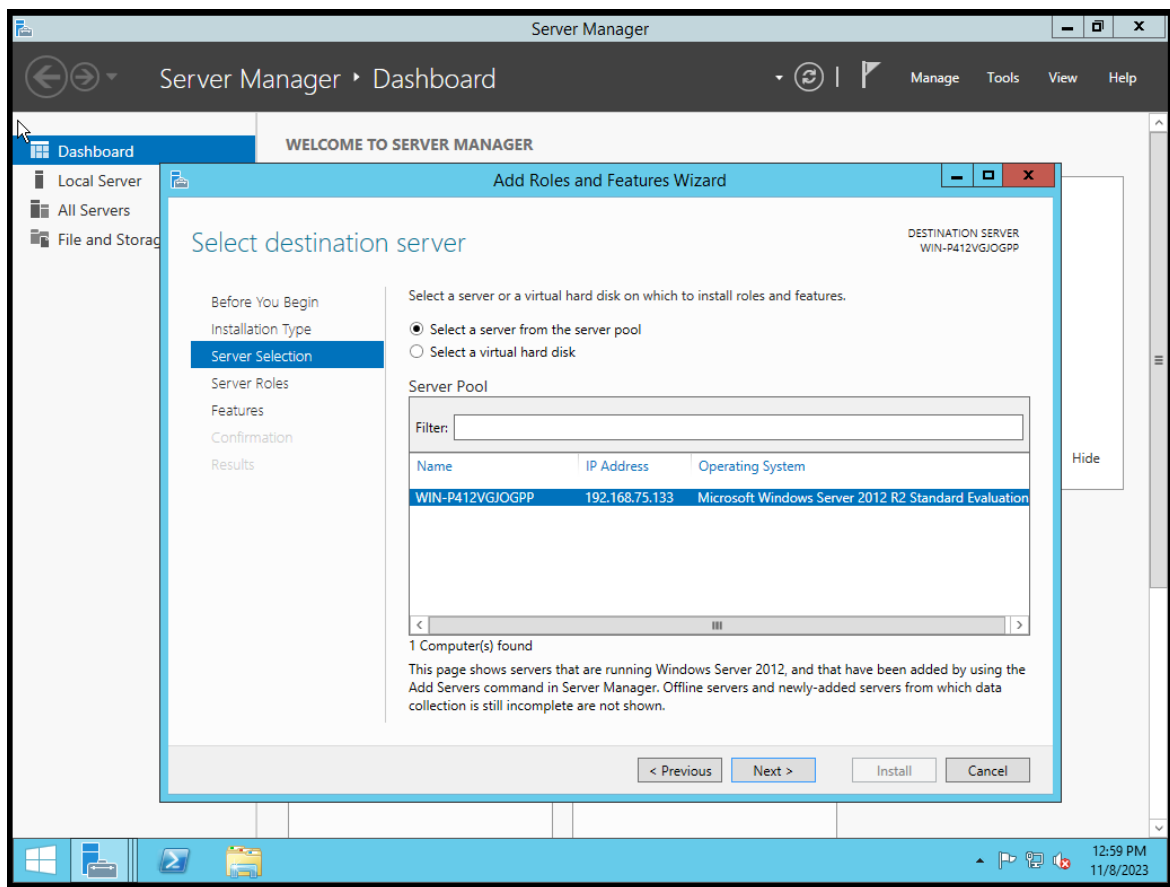

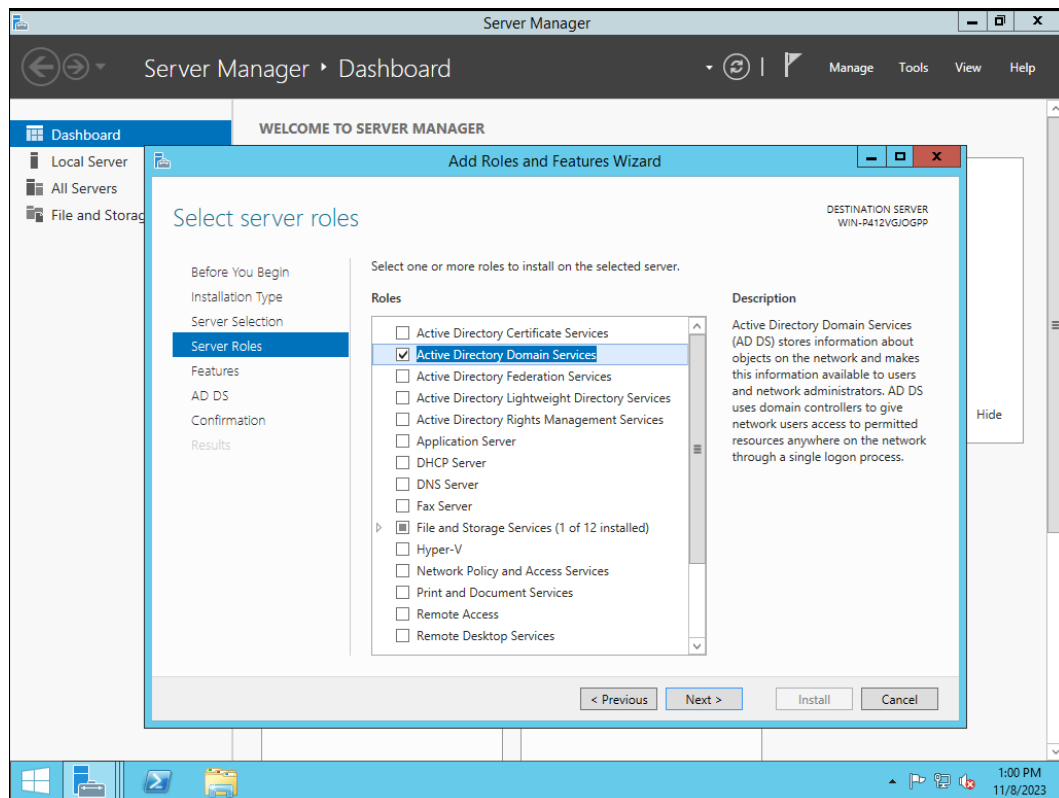

Step 28- click on radio button 'role based or feature based installation.'

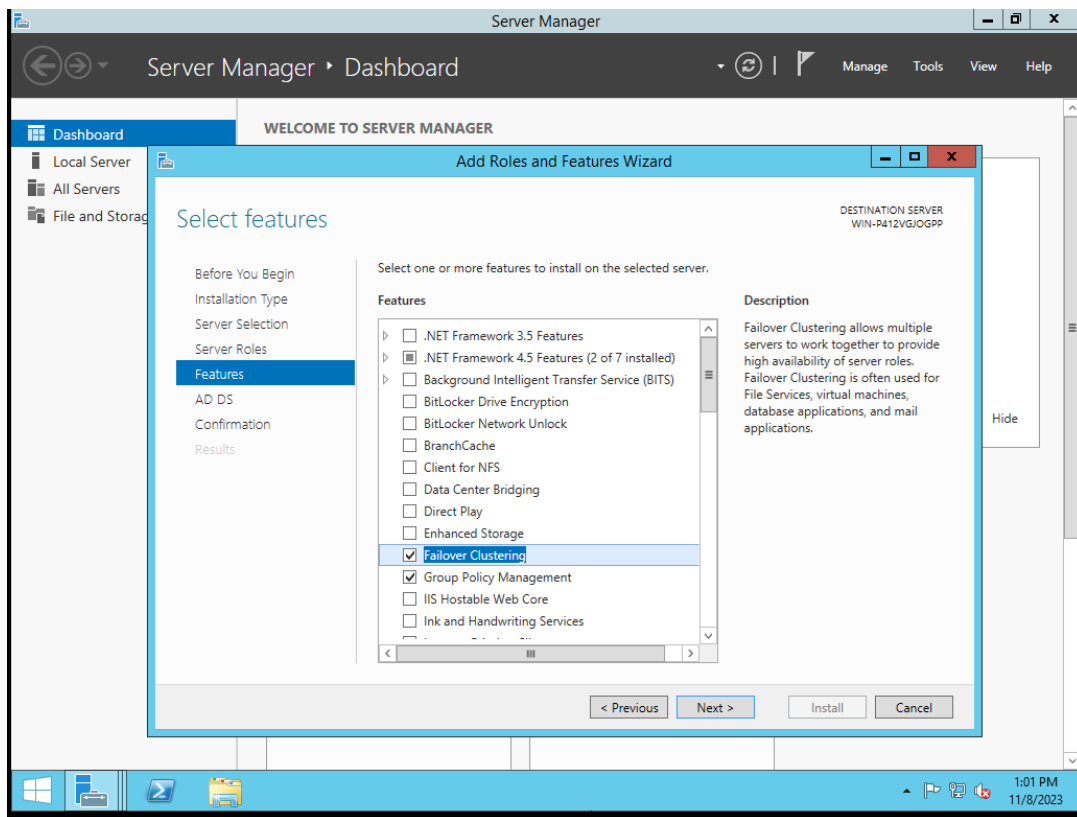

Step 29- Select the default server pool > click next.

Step 30 – check checkbox 'Active Directory Domain Service.' > click next.

Step 31 – check checkbox ‘Failover clustering’ > click next.

Step 32- click install.
